**FSC PARTNERS MEETING**

**1<sup>st</sup> February 2024**

# FSC PARTNERS MEETING AGENDA

1. Opening Remarks (MoAI, SODMA and MoLFR)
2. Introduction of the National FSC Coordinator (WFP) & the Dedicated Banadir FSC Coordinator
3. PDAD Updates - WFP/PDAD Group 2
4. FSC updates - 2024 HNRP, December response, Overall 2023 response, Planned response (Jan - Mar 2024)
5. Household Economic Analysis (HEA) Outcome for Four Livelihood zones in Baidoa - SCI
6. AOB

# Introductions

- ❑ National FSC Coordinator (WFP) - Martina Iannizzotto
- ❑ Dedicated Banadir FSC Coordinator - Abdi Dubow Hassan

# Targeting and Beneficiary Selection for Humanitarian Assistance in Somalia

## PDAD Group 2: update

1 Feb 2024

# PDAD TECHNICAL WORKING GROUPS

# PDAD Action Plan

- October-December 2023: review and planning phase
- January - June 2024: Implementation of Action Plan
- Reporting back to Office of Secretary General

# GENERIC STAGES OF TARGETING AND BENEFICIARY SELECTION

**Stage 1**  
Geographical Area Targeting

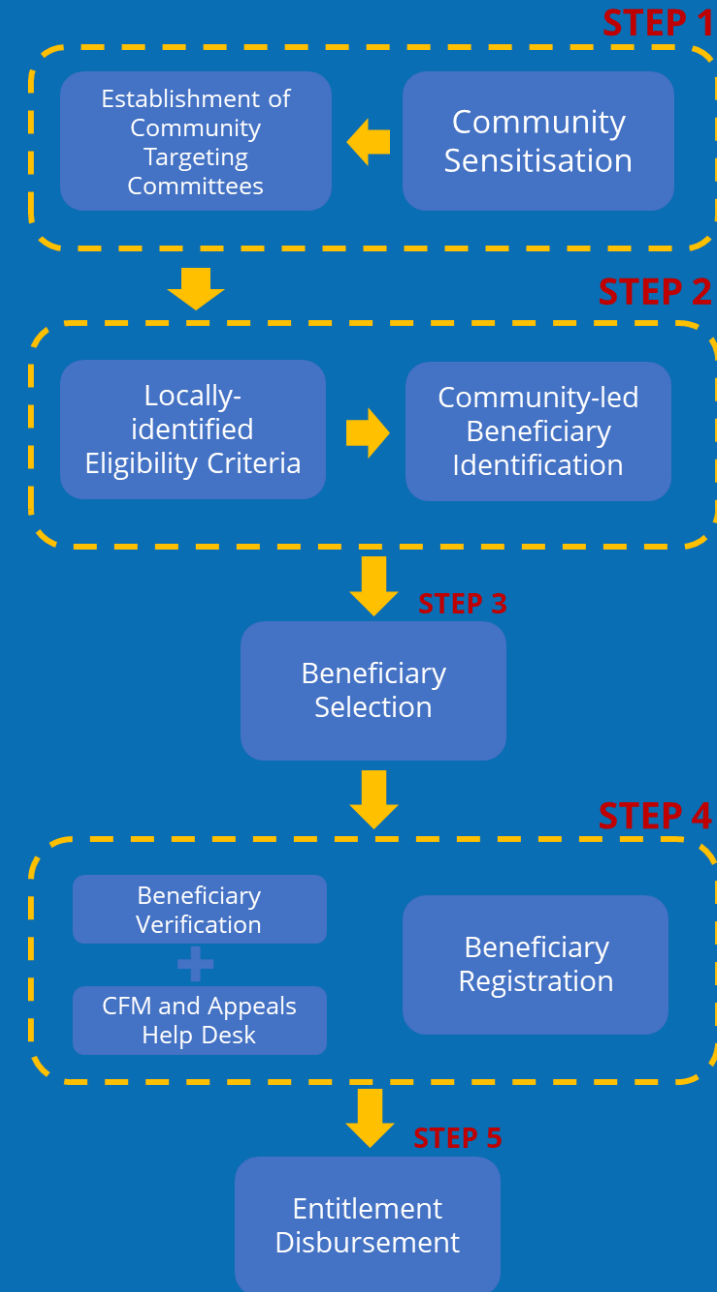

**Stage 2**  
Site selection

**Stage 3**  
Household selection

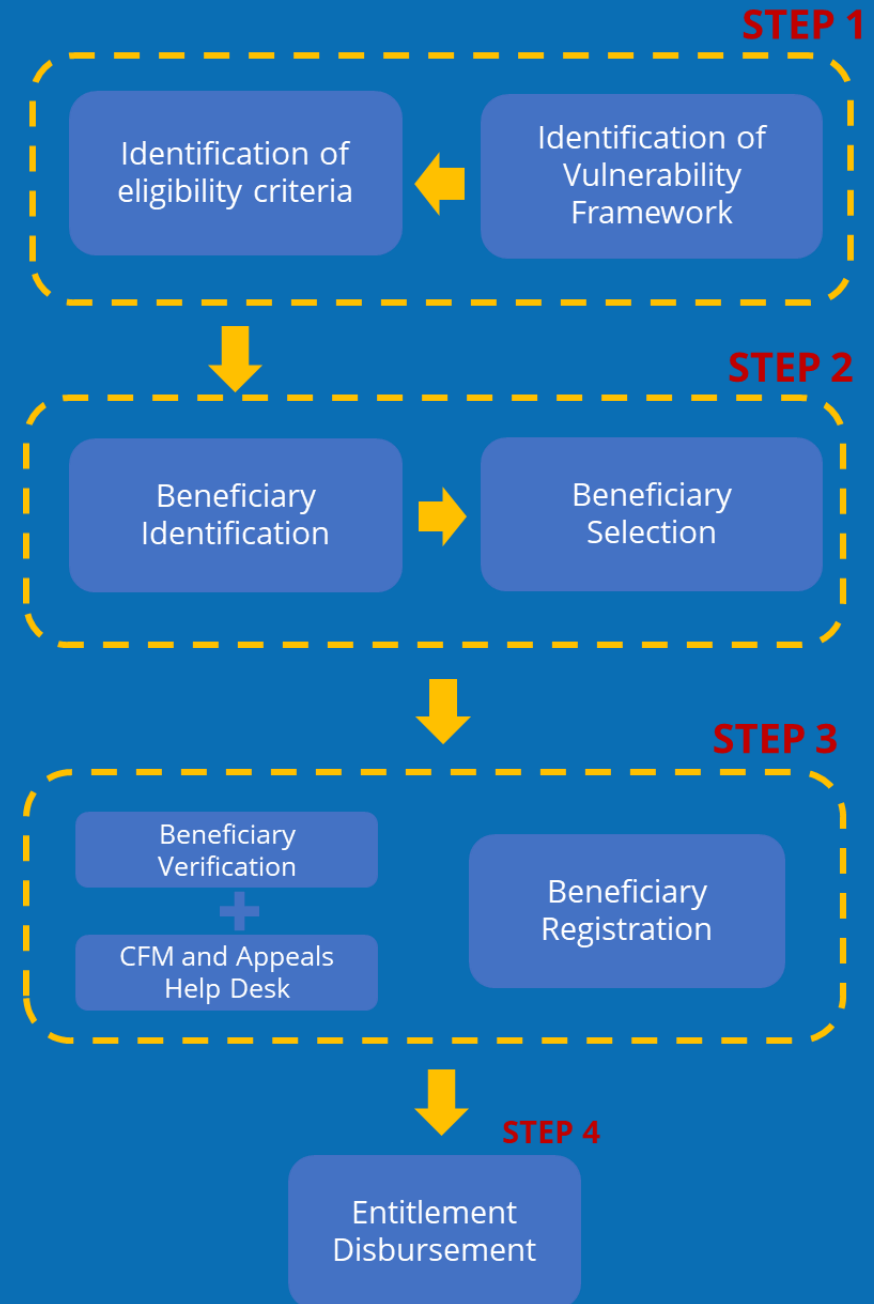

# Community Based Targeting

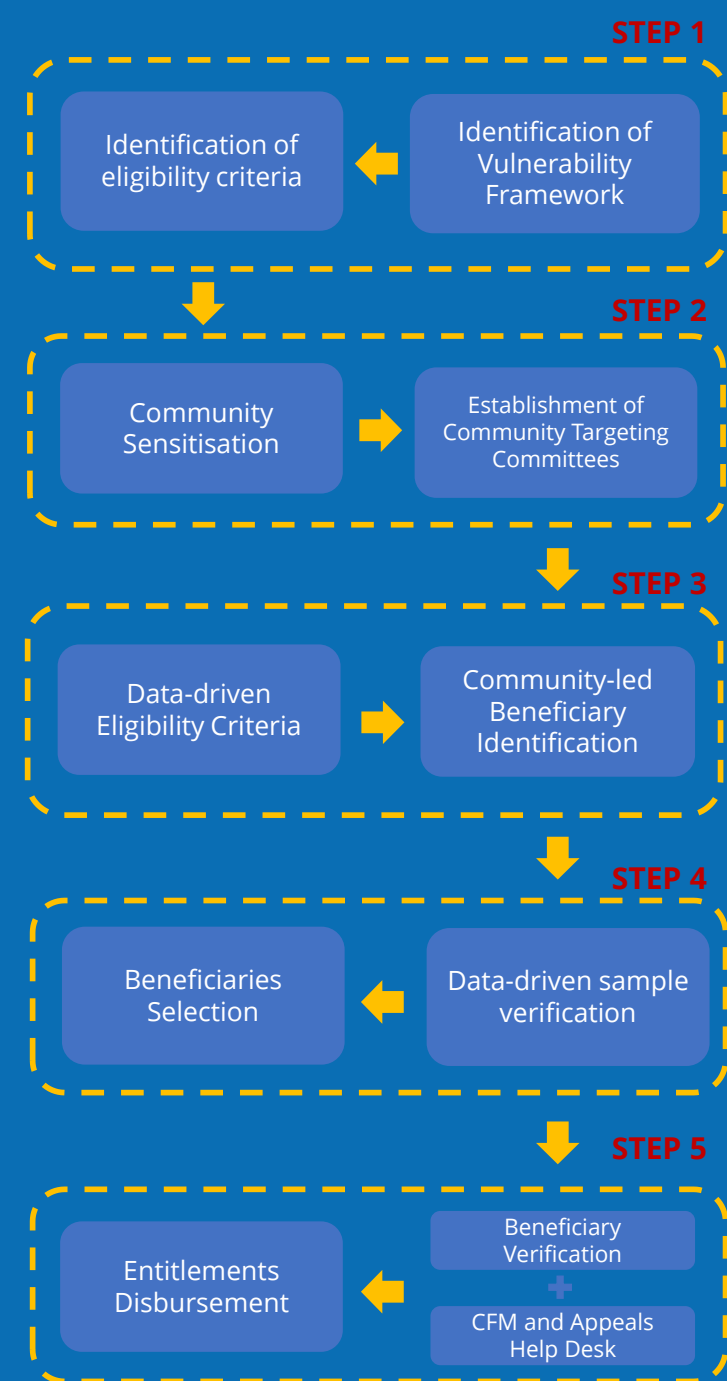

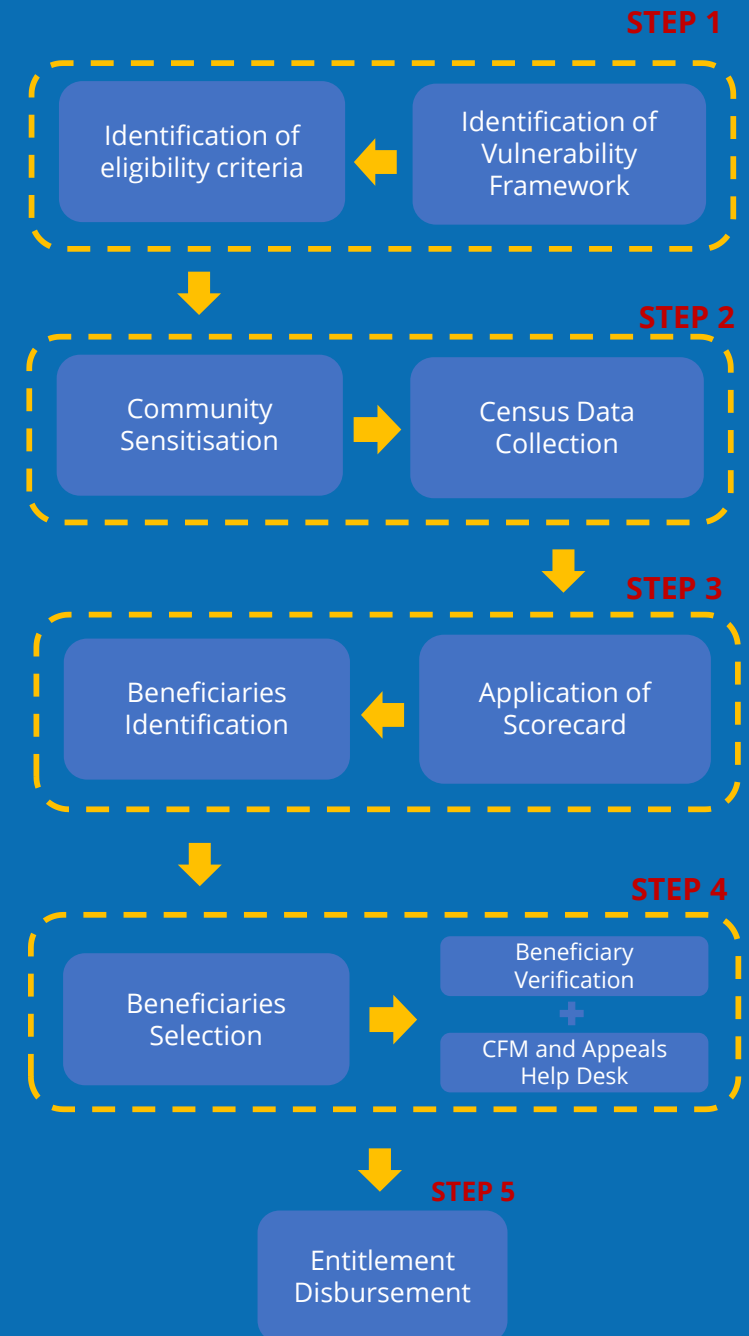

# Category Based Targeting

# Community Based: Data Driven

# Data Driven: Scorecard approach

# Data Driven: Scorecard approach

- Preferred approach to decisively move away from ‘status-based assistance’
- At same time, ‘one size does not fit all’.
- Draft SOPs for Scorecard Approach circulated. Summary

# SOPs for Scorecard Approach: Targeting Criteria and Framework

- **Why?** To have a clear understanding of what makes a household vulnerable (the vulnerability framework) and clear and measurable identification criteria.
- **Vulnerability Profiling:** This vulnerability framework defines a household's vulnerability and is then used in statistical analysis to test the association between a household's vulnerability status against various socio-demographic indicators
- **The goal** is to identify the socio-economic characteristics of households that are statistically associated with food insecurity. This step tests only observable indicators that can be used as verifiable targeting criteria.
- **Design and Testing of Targeting Criteria:** The observable indicators are used to design the targeting criteria as proxies for vulnerability. The developed criteria are then tested on the dataset to determine their precision regarding inclusion and exclusion errors.

# Targeting Criteria and Framework

- i. Evidence-based:** they are informed by vulnerability analysis using representative household data;
- ii. Sensitive:** they can correctly include the people most in need and exclude those in less need of assistance;
- iii. Specific:** they are formulated clearly and unambiguously;
- iv. Feasible:** they can be applied given the available time, resources, and capacities;
- v. Acceptable:** they are context-oriented and acceptable to the communities and beneficiaries; and
- vi. Verifiable:** they are measurable and observable so that the targeting decisions can be checked and challenged by monitoring staff and/or community members.

# Sample Criteria

	Sample Inclusion Criteria	Sample Exclusion Criteria
1	Dependency ratio of 2 or more	Households with formal government income
2	Single-female headed-household with no adult member	Households with formal transfer income
3	Recent IDPs (5-months or less and not currently receiving assistance)	Households with formal rental income
4	Single-parent household with 2 or more children under 5	Household living in a cement house
5	Household with a malnourished PLW	Household owning a car/truck/bicycle

# WFP Pilot of Scorecard Approach

- Briefed local authorities in Baidoa ensuring their buy-in
- Trained targeting focal points at WFP area office, who will act as the custodians of the scorecard pilot
- Identified partner for census data collection introducing additional checks to ensure reliable data
- Officially launched the pilot with implementation expected to conclude by the end of March/early April
- Designed comprehensive learning protocol to inform a potential scale-up

# CHALLENGES AND RISKS

- FORMALIZING THE ROLE OF GATEKEEPERS?
- RISK OF MAINTAINING ‘STATUS QUO’ IF ADJUSTMENTS ARE NOT MADE TO STATUS BASED AND COMMUNITY BASED TARGETING APPROACHES
- RISKS OF COMMUNITY DISRUPTIONS, CLAN RIVALRIES AND SIGNIFICANT PUSHBACK FROM POWERBROKERS AS NEEDS BASED TARGETING ADOPTED

Thank you

The main objective of the Food Security Cluster (FSC) in Somalia is to provide an action-oriented forum for bringing together national and international partners to improve the timeliness and impact of humanitarian assistance on the lives of food insecure and vulnerable populations. The FSC is co-led by the United Nations World Food Programme (WFP) and the Food and Agriculture Organization of the United Nations (FAO). The cluster is currently composed of 199 partners drawn from relevant government institutions, UN entities, international and national NGOs, the International Red Cross and Red Crescent Movement and resource partners.

**OVERVIEW**

Projected Acute Food Insecurity : October - December 2023

**RESPONSE OVERVIEW:**

**SO1 - HUMANITARIAN FOOD & CASH ASSISTANCE**

- Out of the 6.7 million people in need of humanitarian food and cash assistance in Somalia, 3.1 million individuals were reached by 121 FSC partners in 70 districts achieving (48%) against the HRP target.
- Regarding the beneficiary type, (26%) of the reached individuals were IDPs, while the remaining 74% were non-IDPs.
- WFP and its partners covered (69%) of the response, FAO and its partners (21%) and NGOs (10%). For the NGOs, (9%) is from NNGOs while (1%) is from INGOs. Local NGOs deliver a substantial component of the FSC response both independently and as implementing partners of UN agencies and INGOs.

**SO2 - LIVELIHOOD ASSISTANCE**

In August 2023, 17 FSC partners delivered seasonally appropriate agricultural inputs, emergency livestock assistance, and other forms of livelihood support to 132,834 beneficiaries 21 districts across Somalia. FAO and its partners delivered (49%) of the response, while other NGOs delivered (51%). Cumulatively from January to May 2023, FSC partners reached 996,783 beneficiaries, which is (39%) of the 2.8 million people targeted for life-sustaining livelihoods assistance in the 2023 Humanitarian Response Plan (HRP). The low response levels were due to funding gaps, seasonality, poor rains, and access challenges in some rural areas.

# Predicting Needs - HEA Outcome Analysis Results

Save the Children International Somalia

01 February 2024

# Critical concerns about the 2023-2024 year

## Multiple hazards affected households in 2023:

- Mixed Seasonal performance (Poor in some areas and Good in other areas and across seasons)
  - Drought conditions extreme north and south of country - during Gu
  - Flooding in southern and central areas Deyr
- Increased prices of commodities
- Rapid population increase in Urban areas

## What was the cumulative effect of these hazards on household food security?

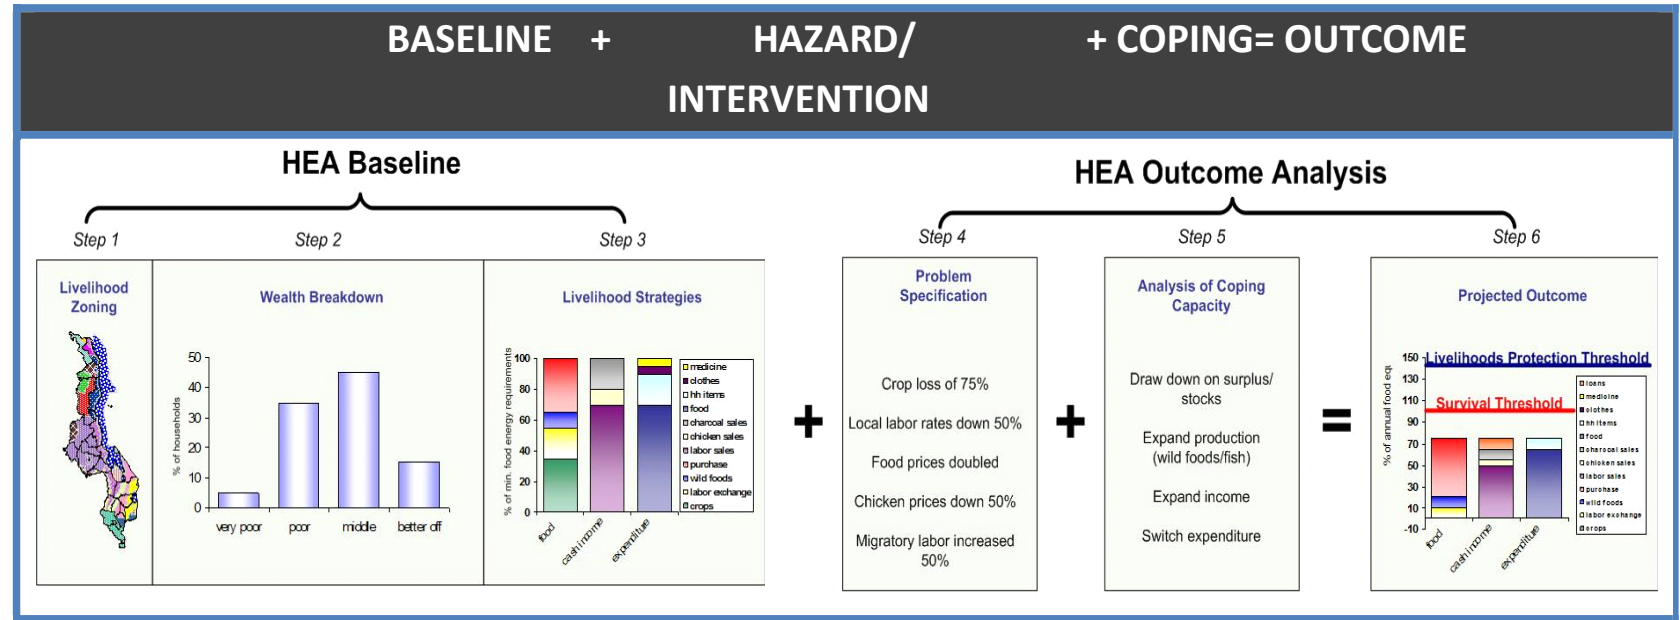

Are certain population groups more affected than others?

Is a humanitarian response required?

Where, when and for how long?

# HEA, or Household Economy Analysis, is a method that:

## Analytical framework

### Background:

- ❖ Methodology: HEA framework combines baseline/context understanding with monitoring data/changes to come up with current and projected livelihood outcomes
- ❖ Timing of Analysis: Analysis conducted is for annual consumption period April 2023 - March 2024 (SO1, SO3, SO6) and January to December 2024 (Urban)
- ❖ Areas assessed: Five (5) livelihood zones in Somalia (SO1, SO3, SO6, Baidoa Urban and Baidoa Urban IDP)

HEA, or Household Economy Analysis, is a method that:

Starts with a **baseline** of household livelihoods

Quantifies the initial effect of a **hazard** on prices and production

Then **models the effect** of production and price changes on household food and income access

And finally **predicts needs** for the upcoming year/season.

# Areas covered in the assessment

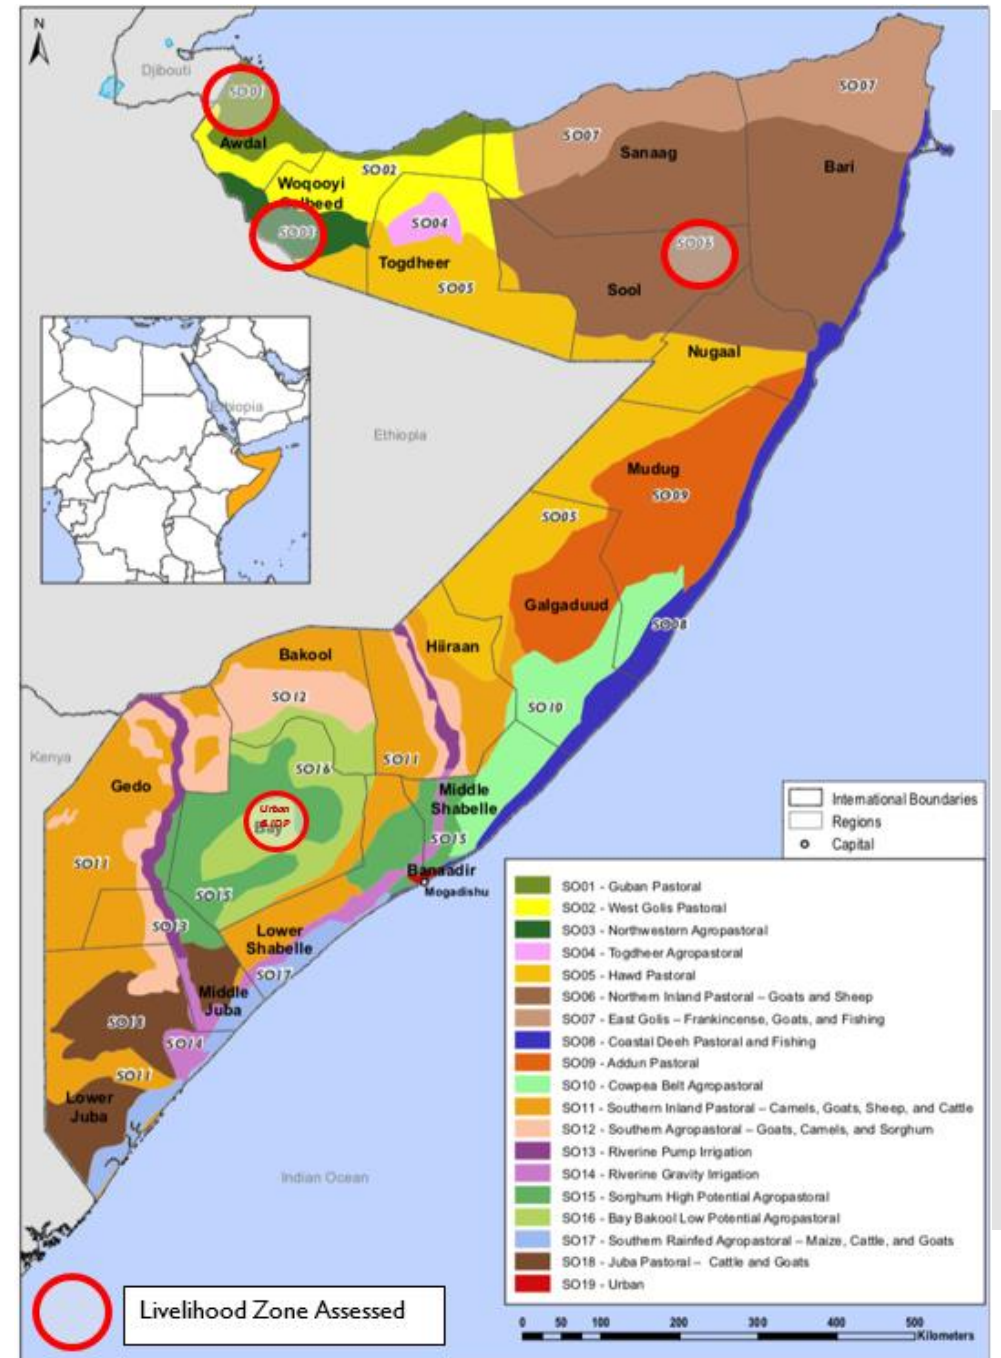

SO1 Guban Pastoral

SO3 Northwestern Agro-pastoral

SO6 Northern Inland Pastoral - Goats and Sheep

Baidoa Urban - Host Community

Baidoa Urban - IDP Community

## A HEA needs assessment:

Informs a humanitarian response by specifying:

- ❑ Who needs aid - *which wealth groups; number of people affected*
- ❑ Where - *what livelihood zones*
- ❑ When - *what season; over how many months*
- ❑ How much is needed - *amounts required in MT of food aid and/or cash aid in local currency*

# Livestock Production and Sales

Livestock production  
Problem Specification

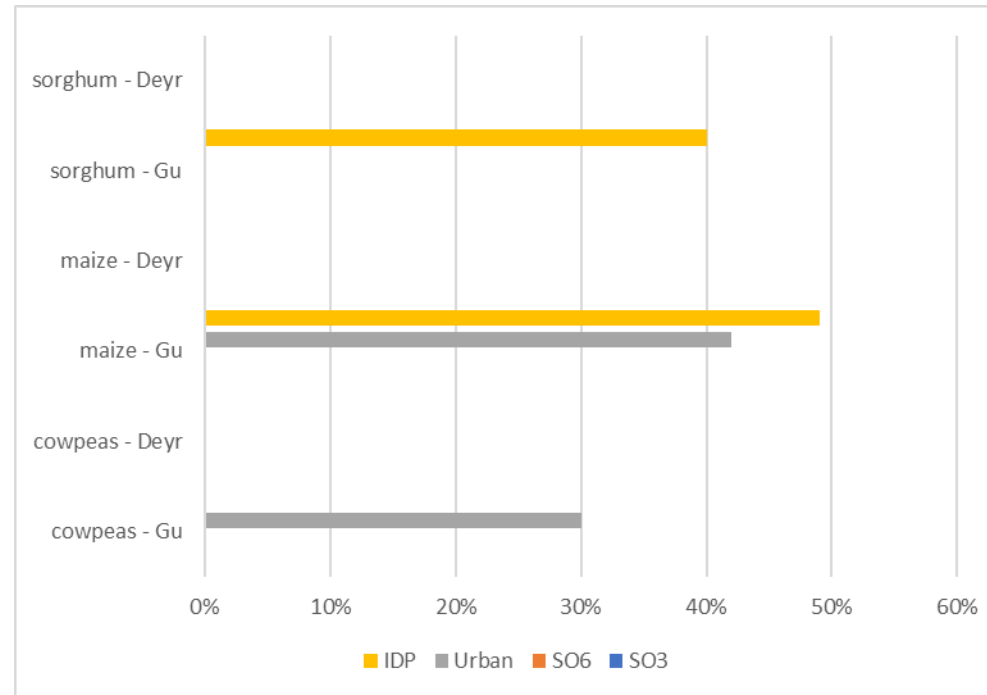

### Main Points:

- ❖ Forecasted above average rains will lead to increase in livestock production leading to increase in milk for all livelihood zones and livestock types
- ❖ On average, camel, cattle and shoat herd size had slight decreased due to mainly off takes through sales in past seasons and expected good rains will bring relief and recovery of livestock losses.
- ❖ On average, livestock prices increased with shoat's experience by 12%-15% Camel 30-86% and cattle 13% from baseline prices.
- ❖ Deyr seasonal performance is likely to increase contribution of livestock sales and milk to household incomes.

Key Param	SO1	SO3	SO6
LIVESTOCK PRODUCTION			
camel milk	→ 94%	↑ 235%	↓ 50%
camel milk	↑ 233%	→ 108%	→ 100%
cow milk -	N/A	↑ 192%	N/A
cow milk -	N/A	↑ 136%	N/A
shoat milk	↑ 197%	↑ 146%	↓ 65%
shoat milk	↑ 117%	→ 105%	→ 109%
camel	↑ 147%	↑ 123%	→ 100%
cattle	N/A	↑ 136%	N/A
shoats	↑ 148%	↑ 123%	→ 109%

# Crop production Problem Specification

## Crop production: Problem specification

### Main Points:

- ❖ **Gu Season 2023:** Crop production was poor with total failure observed in SO3 and over 50% drop for Urban and IDP areas. SO6 had a total failure of production
- ❖ **Deyr Season 2023/24:** Projected to be good and estimates based on assumptions suggest a maintenance of typical production levels. This is however a short season and recovery from agriculture drought is expected in all agropastoral and pastoral areas.
- ❖ Lean period is expected to worsen in January 2024 for most zones/districts among the very poor and poor households.

# Other Income Sources

# Problem Specification

## Other Income Sources: Problem Specification

Key Parameter	SO1	SO3	SO6	Urban	IDP
self-employment	N/A	↓ 0%	⇒ 100%	↑ 113%	↓ 67%
remittances	↑ 122%	⇒ 100%	⇒ 100%	↓ 79%	N/A
firewood/charcoal	↓ 65%	↓ 0%	N/A	N/A	↓ 49%
Construction/ building poles sales	N/A	N/A	↑ 120%	⇒ 108%	⇒ 107%
Domestic work	N/A	N/A	N/A	⇒ 106%	↑ 117%
Ag. Labour	N/A	N/A	N/A	↓ 50%	↓ 72%

Percentage change in income sources from baseline

### Main Points:

- ❖ Due to the decrease in crop production opportunities for agricultural labour reduced as compared to reference year.
- ❖ Remittances have relatively remained stable with slight drops in Urban due to effects of population increase and COVID 19 impacts.
- ❖ Non-agricultural based casual labour opportunities have increased slightly
- ❖ Self-employment opportunities are expected to decrease in IDP and SO3 due to competition

Total Income may not change for Better off and for middle households due to other sources improving. However poor and very poor households are going to experience a loss in income since most of their income sources will decline.

Purchasing power

Price Problem Specification

## The HAZARD: Food and Income Terms of Trade

Key Parameter	SO1	SO3	SO6	Urban	IDP
<b>CHANGE IN PRICES</b>					
inflation	122%	122%	132%	126%	121%
maize/sorghum/wheat	182%	146%	170%	158%	150%
rice	170%	177%	114%	177%	160%
cooking oil	191%	186%	245%	122%	155%
sugar	198%	199%	185%	154%	187%

Key Parameter	SO1	SO3	SO6
<b>Livestock prices</b>			
Milk	→100%	↑134%	↑137%
camel sales	↑135%	↑130%	↑186%
cattle sales	N/A	↑113%	N/A
shoat sales	↑115%	↑112%	↑170%

Key Parameter	SO3	Urban	IDP
<b>Crop prices</b>			
cowpea - Gu	N/A	N/A	N/A
maize - Gu	N/A	N/A	↑110%
sorghum - Gu	N/A	N/A	→100%
sesame - Gu	N/A	N/A	N/A

### Main Points:

- ❖ Worsening purchasing power in all zones due to increase in staple food prices and/or lower increase in income amounts.
- ❖ Prices of crops remain much lower than inflation and other income prices
- ❖ Prices of livestock are increasing, pastoral HHs will gain substantial income only encumbered by number of animals available for sustainable offtake among poorer households
- ❖ Food and non-food access among poorer households is likely to be a challenge as the year progresses

# Results - Food deficits expected (HEA survival deficit)

## SURVIVAL DEFICIT

Region	Population Affected	Food AID	Sum of SD_Cash_USD
Awdal	71 050	4 108	3,761,410
Bari	15 770	16	9,200
Baydhaba/Urban	720 549	47 236	29,187,955
Nugaal	28 498	30	17,430
Saaxil	12 174	397	363,000
Sanaag	58 721	61	35,320
Sool	39 026	41	23,450
Woqooyi Galbeed	33 471	3 723	3,397,400
Grand Total	979 259	55 612	36,795,165

### What does a survival deficit mean?

Households facing a **survival** deficit are unlikely to have sufficient food during the upcoming 2023-2024 consumption year. To meet these food deficits, humanitarian aid (either food or cash equivalent) is needed.

# LIVELIHOOD PROTECTION DEFICIT

Results -  
Income deficits  
expected  
(HEA livelihood  
protection  
deficit)

Region	Population Affected	Food AID	Sum of SD_Cash_USD
Awdal	71 049,66	1 754,92	1,629,730
Bari	15 770,05	605,64	346,900
Baydhaba/Urban+IDPs	759 862,68	33 844,39	21,656,950
Nugaal	28 498,35	1 094,47	626,900
Saaxil	12 174,00	395,00	361,670
Sanaag	58 721,46	2 255,18	1,291,730
Sool	39 025,63	1 498,77	858,470
Woqooyi Galbeed	33 470,75	274,76	273,160
Grand Total	1 018 572,58	41 723,13	27,045,510

## What does a livelihood protection deficit mean?

Households facing a **livelihood protection** deficit are unlikely to have sufficient cash income during the upcoming 2023-2024 consumption year to meet the cost of their basic needs, including education, health and inputs to maintain and protect their livelihood. Humanitarian aid is needed.

## Recommendations

## Recommendations

- ❑ people in need of Humanitarian assistance. Total requirement is 97,335 MT or SoSH 1,37 trillion or (~ USD 63.8 million) cash equivalent to cover survival and livelihood protection deficits.
- ❑ Strengthen purchasing power of households
- ❑ Targeting of farmers/pastoralists (poor and very poor) that were adversely affected
- ❑ Intensify recovery and resilience building by concentrating on increasing capacity of communities to withstand improve coping with effects of hazards
- ❑ To increase coverage of humanitarian and social protection interventions with targeting of vulnerable groups only.

**END**

Any AOB?

**THANK YOU!**
