

**Strategic Objective 3 Update**

FSC partners have started providing seasonal inputs and livestock assets protection to the affected population in Somalia for the Dyer season. This response is a continuation from the recently ended Gu-season.

Farm input, irrigation support, animal treatment and water provision (Puntland) are the main types of support under this response objective.

FAO accounts for 82% of the number of people assisted in August. It is expected that the level of assistance will significantly increase with the recently rolled out vaccination campaign against PPR (Pests des Petits Ruminants) and SGP (Sheep and Goat Pox), and supplementary feed distribution (range land cubes and Molasses urea mineral blocks).

**Beneficiaries by Input**
