Strategic Objective 3 Update

FSC partners have scaled up their livestock assets protection and seasonal inputs support in September as planned.

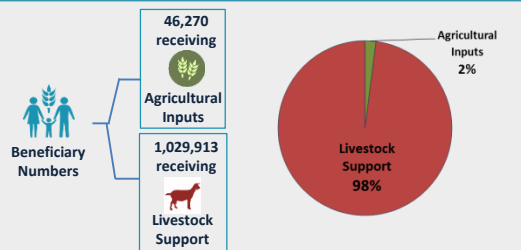

Vaccination of animals against Pestes des Petits Ruminants (PPR) and Sheep and Goat Pox (SGP), and treatment against common infectious conditions were the major area of response (86% of beneficiaries assisted). The effort has contributed to the containment of disease outbreaks and to protecting livestock assets from further losses.

The provision of water trucking in parts of Puntland and localized fodder support has also complemented the effort of livestock assets protection.

Around 32,000 people benefited from agricultural inputs mainly seed and irrigation support over the last two months of the Dyer season.

FAO has contributed 95% of the beneficiaries assisted under this response objective over the last two months.
