PREPAREDNESS
RESPONSE

Overall delivery plan

The sectors response will prioritize life-saving activities and reach the most food insecure groups. We will focus mainly on Prevention and treatment of malnutrition for vulnerable groups mainly children under 5, pregnant and lactating women and Food assistance to the affected population. The preparedness plan will ensure joint coordination with other sectors for optimum resource utilization. In addition to the General food distribution to the affected households, the intervention will include community management of acute malnutrition for children 6-59 months, blanket supplementary feeding program for children and lactating women and distribution of vitamin A and deworming tablets through community mobilization and sensitization, members of the community will be utilized in identification of cases at the community level and referral to OTP for treatments.

Existing community structures will be engaged at every stage of the program intervention to ensure maximum support and acceptance of the program. Strong feedback mechanism will be established together with the members of the community through food management committee (in case of BSFP) to ensure continuous improvement in quality of program delivery. Infant and young child feeding, Hygiene practice at the households will be integrated into the sensitization package to promote, support and protect breast feeding including measures to prevent and mitigate the impact and spread of water borne diseases.

Food prepositioning for areas with difficulty in access (due to flood or security concerns) will be prioritized. Through coordination with WFP and other partners, MSU for food established in some locations will be co-utilized to preposition (four months food requirements) nutrition supplies. Task force will be established at the community level to support especially movement of RUTF from the prepositioned locations to various OTP centers utilizing local solutions which might include donkey carts.

The distribution criteria will be determined together with the community. Resource-community based targeting will be applied to determine beneficiaries. Community management of acute malnutrition will be managed at the health facilities and outreaches while BSFP will be implemented at the community. Community members will be directly involved in determining field distribution locations and dates. Through coordination meetings, partners will be utilized based on capacity to implement in specific locations. Capacities of local partners will be built to be able to respond to the needs. Sectoral capacity development will also be prioritized to ensure that both food and nutrition sectors have the capacity to respond to the needs.

OPERATIONAL DELIVERY

Nigeria Food Security and Nutrition sectors Operational Delivery Plan Summary

The Nutrition & Food Security sectors Operational Plans detail immediate response actions. Below is a summary of key activities and indicators:

Nutrition & Food Security		
Activities	Indicator	Target
