Updates on 2021 & 2022 FAO Livestock Restocking Programme in Borno, Adamawa and Yobe States: challenges and opportunities

Monday, May 23, 2022

2021 livestock caseload for Borno State , 4 LGAs:

Goats: 2550 HH (**326 HH**); rural poultry: 1900 HH (**1900 HH**):

SP	Project	State	Location	Activity	
				Goat HHs	Poultry
CBARDP	OSRO/NIR/805/NOR	Borno	Mafa	300	300
CBARDP	OSRO/NIR/100/GER	Borno	Bama	300	300
DHCBI	OSRO/NIR/100/GER	Borno	Jere	300	300
DHCBI	OSRO/NIR/102/CAN	Borno	Konduga	600	600
CBARDP	OSRO/NIR/102/CAN	Borno	Bama	200	200
DHCBI	OSRO/NIR/102/CAN	Borno	Jere	400	
CBARDP	OSRO/NIR/102/CAN	Borno	Mafa	200	200
DHCBI	OSRO/NIR/101/SWE	Borno	Konduga	150	-
			Total	2,450	1900

TBD	OSRO/NIR/107/IRE	Sokoto	Gwada bawa	100	0
			subtotal	300	0
			Grand total	400	200

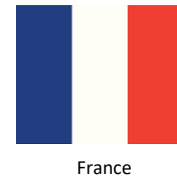

Global total 5300 3500

Challenges and mitigating measures

- Extortion of vendors transporting animals along our highways by security personnel despite security clearance from Operation Hadin Kai adds to the cost of delivering goats. (**high-level advocacy with military commanders**)
- Volatility of prices of items such as goats causing delay in delivery as suppliers wait for times of favourable price to maximize profit. (**Prompt sanctioning of non-performing vendors**)
- Cancellation of Purchase orders and re-award of POs to another supplier take time and cause considerable delays in delivery (**Taking preventive measures such as awarding POs only to vendors quoting realistic prices**).
- Difficulty faced by some beneficiaries to continue to provide feed to the goats after finishing the FAO-distributed feed (**refining geographical targeting sites to include areas with access to grazing land and HHs having crop residues**)
- Improper use of FAO-distributed feed, especially the feeding of cottonseed cake alone leading to diarrhoea and hair ball (**Adequate training of beneficiaries with focus on the proper utilization of kit components**)
- Inadequate training of beneficiaries by Implementing Partners
- Few cases of disease outbreak after distribution (Post-distribution veterinary has greatly reduced cases of mortality (through ambulatory clinical services and prompt treatment of cases) and morbidity (**through vaccination, biosecurity and advisory services**))

Opportunities

- The success of the rural/local poultry (noiler) interventions across BAY states has led to a high demand for livestock-based interventions in the early recovery period in crisis-affected communities in the Northeast for nutrition, income generation and employment
- Recently resettled population in Mafa, Bama, Banki, Konduga, Baga, Ngoshe, etc. need livestock to rebuild their livelihoods and enhance resilience; actors should cash in on this need
- There is an increased awareness on the need for agriculture-based income-generating activities through promotion of agribusiness opportunities
- Livestock assets are of very high value and utility in the Northeast. There is hardly any rural household in the Northeast that did not have livestock before the conflict
- Unlike other types of interventions, thousands of people can be reached with agriculture-based livelihood interventions

Thank You
