Ethiopia: National Response Dashboard

January - July 2023
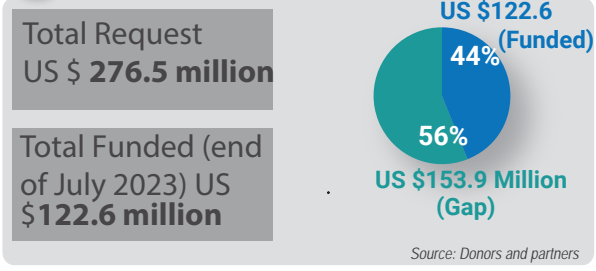

ETHIOPIA AGRICULTURE TASK FORCE

OVERVIEW

The Northern areas in Tigray, Amhara and some central areas of Oromia, due to the El-Nino phenomena, have received normal to above normal rainfall with pockets of areas experiencing drier than usual conditions. The good performance of the belg rains has marginally improved food security prospects and reduced the number of people who require assistance in the coming months. Livestock losses incurred over successive droughts have resulted in a shortage of animals for sale and low milk production in the current season. Crop pests have been reported recently - mainly army worms and desert locusts in Northern Ethiopia (Tigray, Afar, Amhara) and some parts of Oromia. Notwithstanding some isolated cases of below normal rainfall, the overall situation was favorable for kiremt season's agricultural activities.
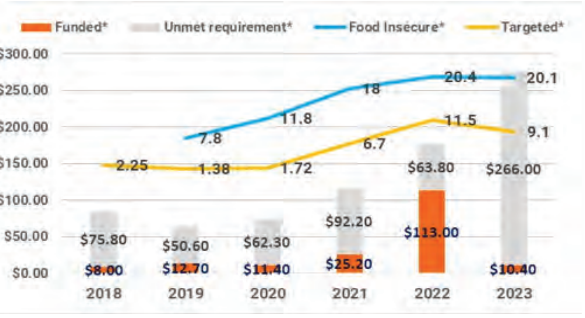

17.8 million in need
**9.1** million targeted
2.6 million reached

40 partners

Agriculture Response Funding

Total Request US $ **276.5 million**

Total Funded (end of July 2023) US $**122.6 million**

US $122.6 (Funded) **44%**

56% US $153.9 Million (Gap)
