COUNTRY RESPONSE UPDATE

As of September, FSL cluster assisted over 2.5 million people for strategic objective 1 with activities aimed at improving access to food through different modalities in all States of South Sudan. 83% of beneficiaries received food and 17% received Cash and Vouchers. In addition, under strategic objective 2 more than 4.49 million people are being assisted with livelihood and livestock inputs/assistance to improve resilience of the rural population. According to the September IPC 2017, 6 million people (56% of the total population) estimated to be severely food insecure, out of which 40,000 are in Humanitarian Catastrophe at household level (IPC Phase 5) and 2 million are facing Emergency (IPC Phase 4) food insecurity. Humanitarian assistance is critical in averting the emergency situation deteriorating to catastrophic levels. Access to affected populations remains a challenge due to insecurity, with reported cases of access constrains increasing in 2017. IPC classifications already forecast that a significant assistance would need to address the needs of severely food insecure populations.

Out of US$ 689 million requested in the HRP funding totalling 74% (i.e. $511 million ) has so far been received as per the Financial Tracking System (FTS).

PARTNERS PRESENCE & IPC PHASE  (As of September 2017)

FUNDING STATUS

The response data shown for Objective 1 represents the number of people assisted in the month of July. The figures on the graph include Refugee and POCs figures.
