

Afghanistan: Food Security and Agriculture Cluster

Dashboard on cluster achievements and funding – (January – March 2018)

Overview: The number of people facing acute food insecurity during the ongoing 2018 lean season is estimated to be greater than 2017, Prolong dry spell and poor rain fall affected agriculture, livestock farmers and laborers.

The ongoing La Niña is expected to drive below-average cumulative precipitation and above average temperature. Agriculture and livestock production is significantly impacted in 21 provinces of the country. FSAC is planning a nation wide assessment to understand the impact of the drought and needs.

Response: The current response against actual HRP targets remained satisfactory for the first quarter 2018. FSAC response mostly provided to conflict IDPs and natural disaster affected people. The targets against conflict affected IDP's and host communities looks over achieved because of caseload left over from year 2017.
