Overview: Despite a good level of precipitation and harvest in 2020, the food security situation is still alarming in the country. Based on IPC analysis 2020, between November 2020 to March 2021, a total of 16.9 million people (42% of the total population) are facing severe acute food insecurity. These include around 11.4 million people in crisis (IPC Phase 3) and 5.5 million people in emergency food insecurity (IPC Phase 4).

Multiple food security indicators collected through the Seasonal Food Security Assessment (SFSA, 2020) confirm this situation. In addition, 69% of the households reported experiencing a recent shock. The major shocks faced by respondents included loss of employment (36.5%), reduced income (18.3%), followed by severe sickness or death (10.7%). About 25% of households reported resorting to crisis strategies, 36% to emergency coping strategies and 22% relying on stress strategies. Of breadwinner (due to COVID-19) together with a huge increase in food prices (11%).

In addition, 69% of the households reported experiencing a recent shock. The major shocks faced by respondents included loss of employment (36.5%), reduced income (18.3%), followed by severe sickness or death (10.7%). About 25% of households responded to crisis strategies, 36% to emergency coping strategies and 22% relying on stress strategies.
