

CO2. IMPROVE FOOD SECURITY STATUS THROUGH PROVISION OF AGRICULTURE ASSISTANCE

In the second quarter of 2020, 3 FSLC partners provided agricultural assistance and supported **1,311** beneficiaries (or 9% achievement) out of 14,542 people targeted in April and May. Cumulatively, **3,350** people have been reached since January 2020 representing 8% of the revised target of 28,420 people. PiN covered 48% of the people assisted in April, 38% by PAH, and 14% by NRC.

There is a need to scale up agriculture inputs to support production, improve food security status, and support the livelihood of farming households. The need for agricultural assistance remains high along the 'contact line', including in NGCA, most especially considering the existing condition with mine contamination of fields, water shortages, and unstable irrigation

PEOPLE ASSISTED BY REGION
