The Federal Ministry Of Agriculture And Irrigation of Somalia (MoAI) with support from WFP has successfully launched a Market Price Data Collection Project to produce high-quality and timely quantitively data to monitor domestic prices on food and relevant commodities and help inform policy development priorities in agriculture.

The project has kicked off in ten district markets across Benadir Regional Administration (BRA) and Federal Member States (FMS) as project pilot locations in early November last year.

The quantitative data is collected and compiled by enumerators on weekly basis using a smartphone with ODK as a data collection tool.

The compiled data is then submitted to and stored in a tool developed by WFP which is known as MODA.
