According to the latest Cadre Harmonise analysis conducted in November 2017, 3.9 million people in the six states of northeast Nigeria are projected to be food insecure and considered to be facing either crisis, emergency or famine situations, with 3.7 million of this in Adamawa, Borno, and Yobe states. Due to access challenges and data limitations, four LGAs (Abadam, Guzamala, Kala/Balge and Marte) were not included in the November CH analysis. Food Security Sector partner intervention plans for January to June 2018 indicate that 3.6 million people will be assisted with Food and Agriculture based interventions. Of this, only 2.2 million of the 3.7 million projected to be food insecure in the three states are expected to be reached with food assistance and 1.4 million of 2.9 million targeted for agricultural interventions are planned to be reached in advance of the 2018 Lean Season.
