South Sudan

Since 2012, REACH has been providing Information Management and assessment capacity to support UNHCR and other aid actors engaged in the refugee response in camps in Unity and Upper Nile states. REACH teams continue to contribute to the BRACE project to build resilience against climatic extremes.

Background
To inform humanitarian actors working outside of formal settlement sites, REACH has been conducting remote assessments of hard-to-reach areas in South Sudan since December 2015. The data is being collected through interviews with Key Informants (KIs) about their areas of knowledge outside formal settlement sites on a monthly basis covering settlements across the Greater Upper Nile region, Greater Equatoria region and Western Bahr el Ghazal. Between 6 and 27 July 2017, REACH interviewed a total of 1,593 KIs. The KIs were from or had specific knowledge about 736 settlements, located in 43 counties and 7 states in South Sudan.* This factsheet provides a brief overview of the key Food Security findings from July data.

Key Food Security Trends: July 2017
Only 35% of assessed settlements reported sufficient access to food in July, the lowest level recorded since REACH began consistent data collection in Greater Upper Nile in September 2016. Most noticeably since March 2017 the proportion of assessed settlements reporting adequate access to food has decreased in the Equatoria region, to similar levels witnessed in parts of the Greater Upper Nile region. For example in July 2017, all counties in Central Equatoria had less than 25% assessed settlements reporting sufficient access to food. In Western Bahr el Ghazal reported adequate access to food remained very low since data collection began in the state in April 2017.
