

5.35 MILLION PEOPLE ASSISTED SINCE EARLY OCTOBER 2022

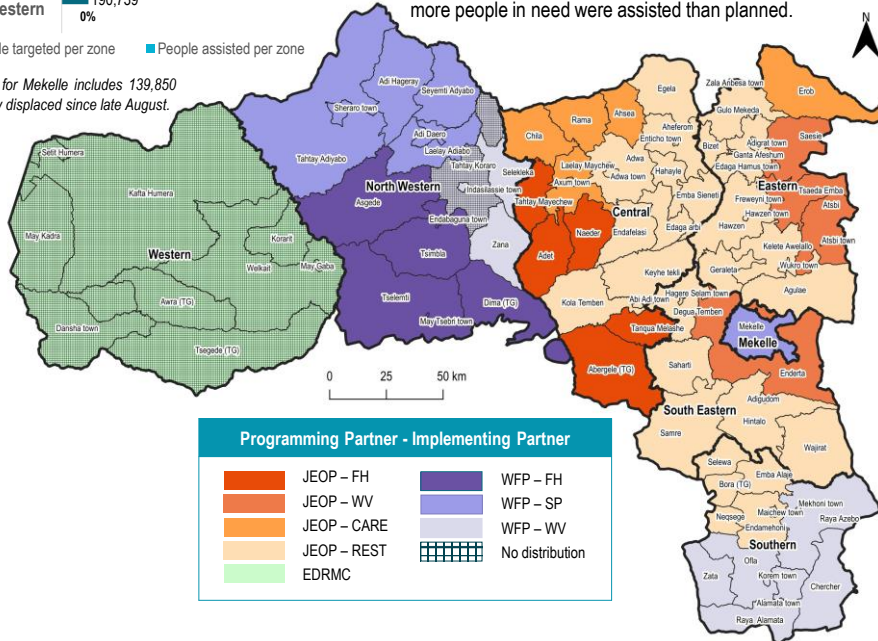

5.4 million people targeted for Round 2

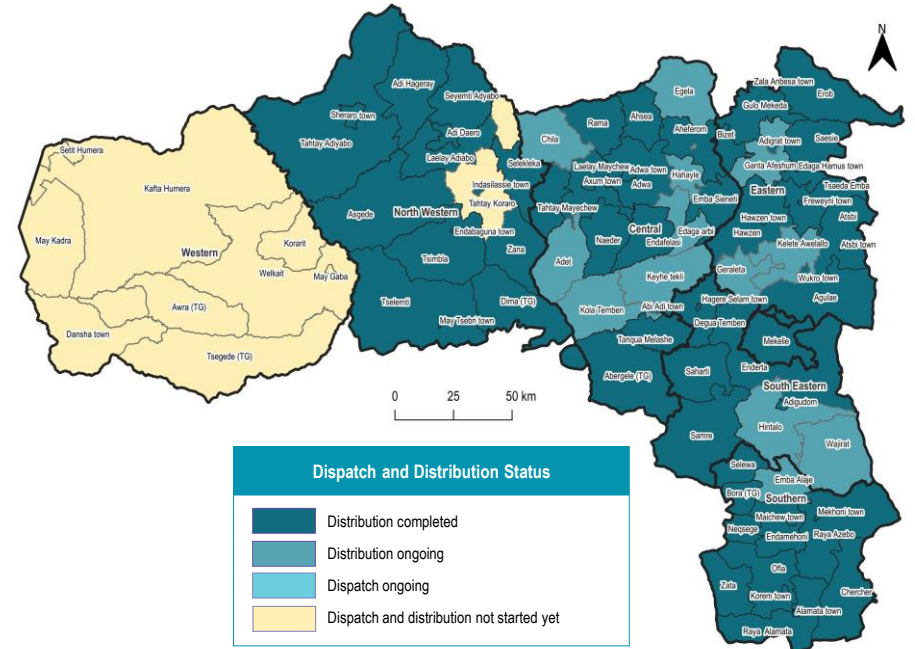

After more than five months since it was launched in Tigray in early October 2022, Round 2 distribution of 2022 was completed on 09 March while final distribution data reconciliation is ongoing. In total, 5,348,038 people (98% of the total planned caseload of 5.4 million people for the region, including Western Zone) were assisted with 89,995 MT of food. Out of the 5.35 million assisted, more than 1,180,000 people are IDPs.

JEOP partners assisted 3,127,617 people (101% of its planned caseload of 3.1 million people) with 52,959 MT of food; and WFP and its partners assisted 2,220,421 people (104% of its planned caseload of 2.1 million people) with 37,036 MT of food. Due to the influx of IDPs following conflict resumption in late August 2022, more people in need were assisted than planned.

* The target for Mekelle includes 139,850 IDPs recently displaced since late August.

FOOD DISPATCH AND DISTRIBUTION AS OF 08 MARCH 2023

Due to access constraints which hindered Round 2 dispatch, food distribution for about 205,600 people (both host and displaced communities) of Zala Anbesa town, Aheferom, Emba Sieneti, Erob and Gulo Mekeda woredas was conducted in neighboring woredas, including Bizet, Adigrat town and Hawzen town. Some had to travel long distance on foot and/or with increased transport costs and protection risks to collect their food rations.

Some communities in three kebeles in Dima Woreda were not able to collect their Round 2 food rations due to concerns over presence of armed forces towards the distribution point and partners' access constraints.

The re-targeting exercise is challenging due to needs identified on the ground often being greater than what the available resources can address in addition to presence of multiple authorities in some zones and woredas, fluid population movements, limited or non-existing local government structure, and lack of documentation among affected populations. As partners only have limited resources to respond to the significant needs identified on the ground, partial family targeting by capping family size is practiced in some woredas to assist more households with the resources at hand.
