

Key Highlights

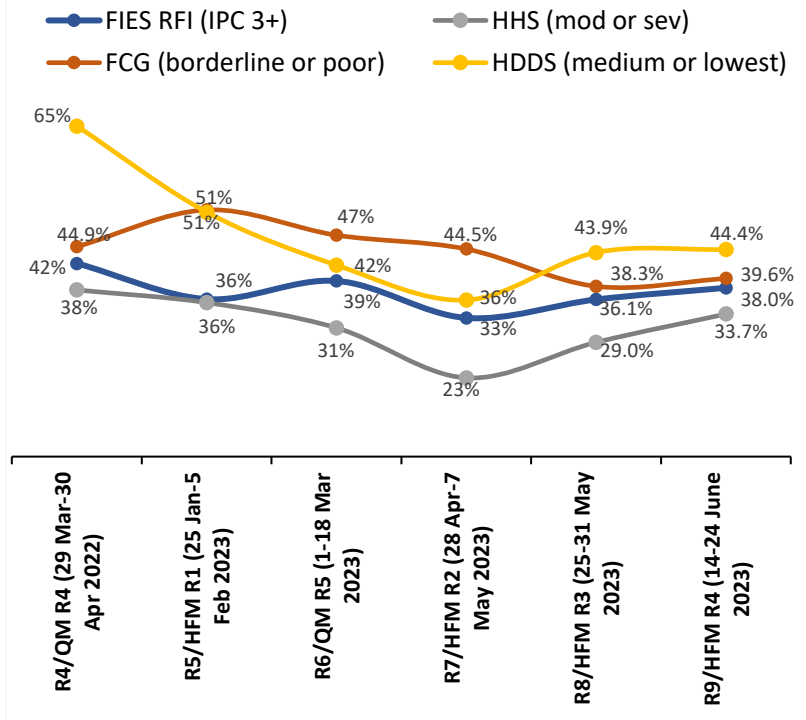

In June 2023, 38 percent of the surveyed households experienced food insecurity equivalent to Crisis and above (IPC Phase 3+) according to the Food Insecurity Experience Scale (FIES).

- Around 34 percent of the households experienced moderate or severe hunger; 44 percent reported moderate or poor dietary diversity, and nearly 40 percent consumed inadequate food (FCG poor or borderline).
- Food security marginally deteriorated in June 2023 than in May. This was largely due to the onset of the agricultural lean season around May that continues until August. However, there is a slight reduction in food insecurity compared to a year ago (April 2022).

Change in Coping Strategy Indices equivalent to IPC Phase 3 (Crisis) and above

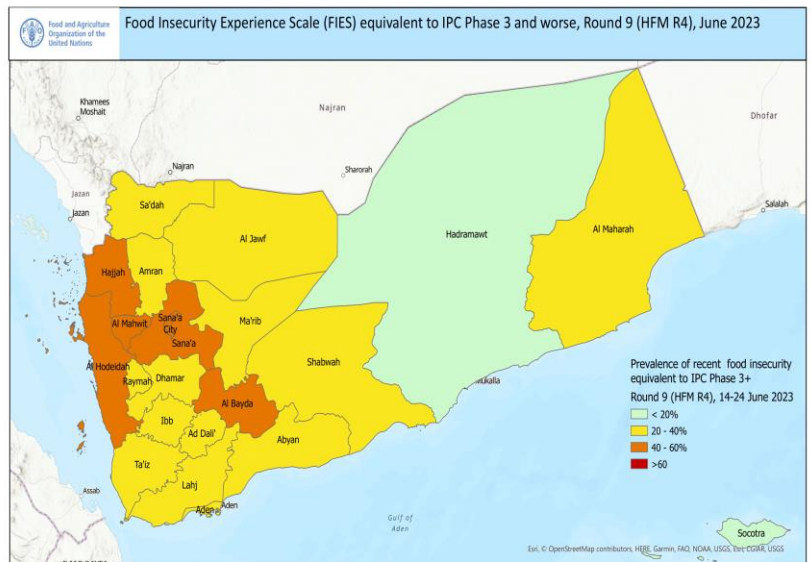

Change in Food Security Outcome indicators equivalent to IPC Phase 3 (Crisis) and above

- Seventy-five percent of the surveyed households resorted to severe livelihood coping strategies (crisis and emergency), damaging the household’s future productivity and capacity to manage shocks. The trend does not show noticeable improvement in 2023. The proportion of households reporting often resorting to food-based coping strategies marginally deteriorated by 1 percentage point in June 2023 than during late May 2023.

- In the current survey, Hajjah emerged as the most food-insecure governorate. In Hajjah and Al Jawf, the prevalence of food insecurity, hunger, poor dietary diversity, and inadequate food consumption have been relatively higher in most monitoring rounds.
- In SBA-controlled areas, the prevalence of food insecurity (equivalent to IPC Phase 3 and above) and hunger has been higher than in the GoY-controlled areas
- Scaling up of humanitarian food assistance and livelihood interventions is recommended in the most vulnerable governorates including but not limited to Hajjah and Al Jawf.

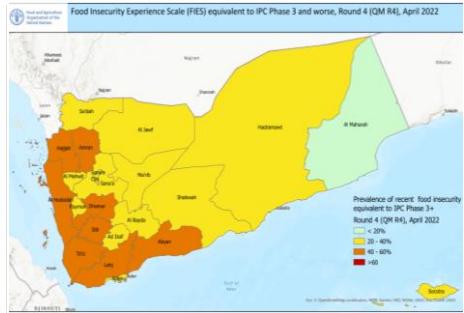

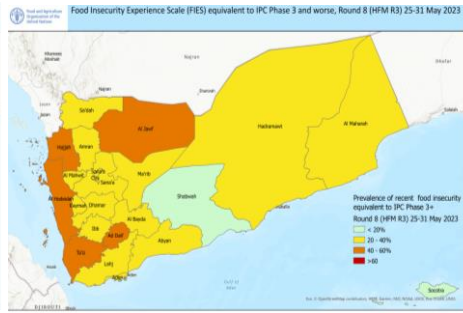

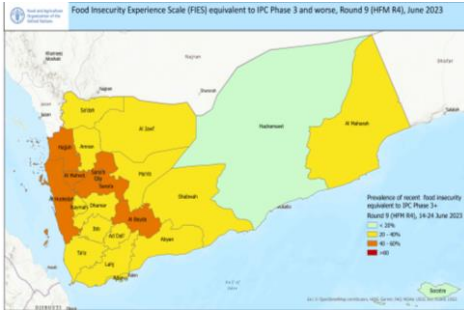

Food Insecurity: Where, When and Who

14-24 June 2023

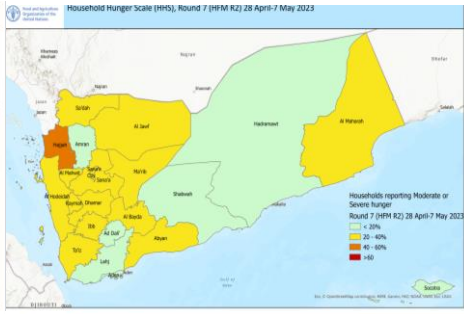

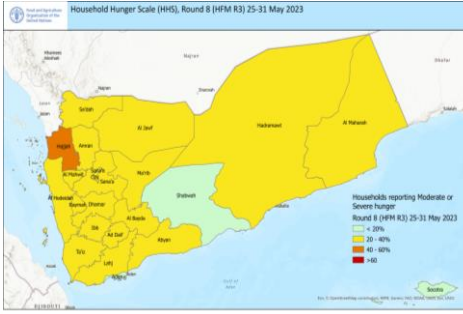

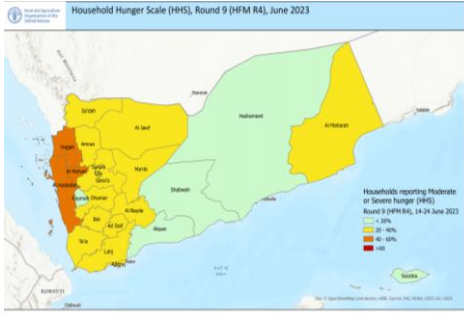

25-31 May 2023

28 April – 7 May 2023

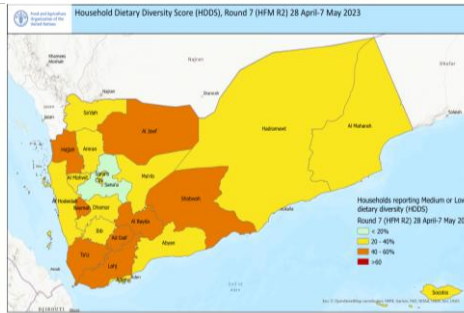

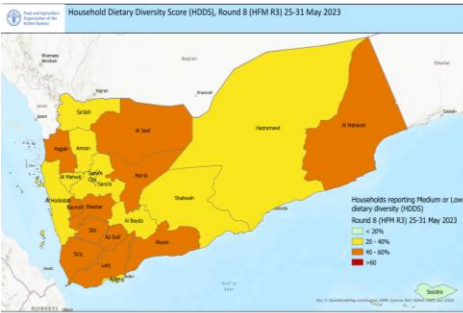

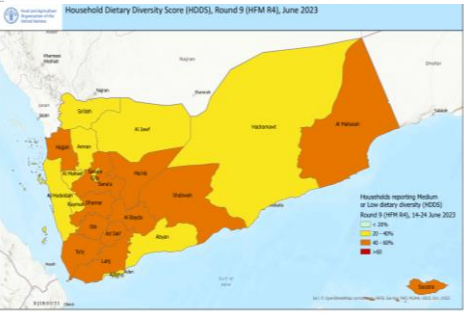

FIES Recent Food Insecurity (RFI) equivalent to IPC 3+

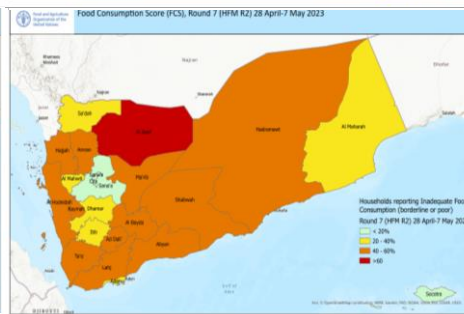

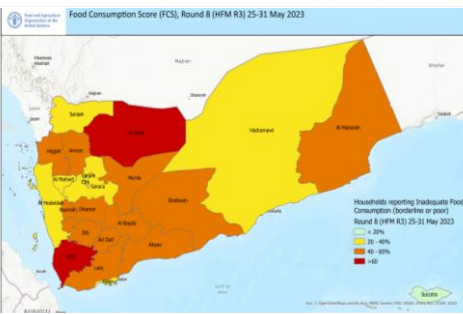

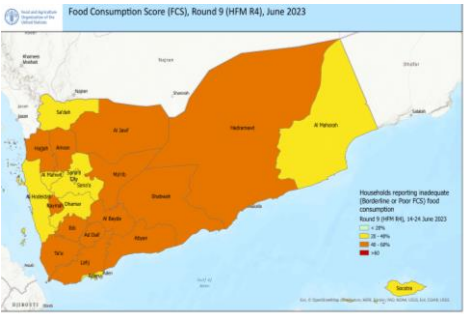

Household Hunger Scale (HHS), Moderate or Severe

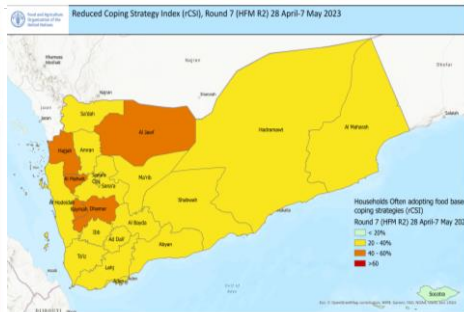

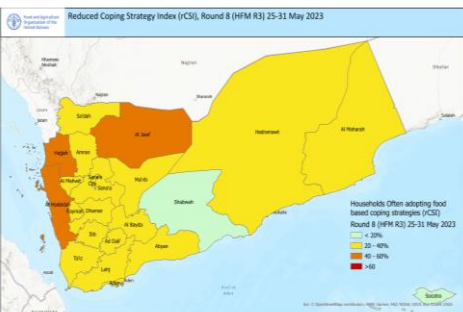

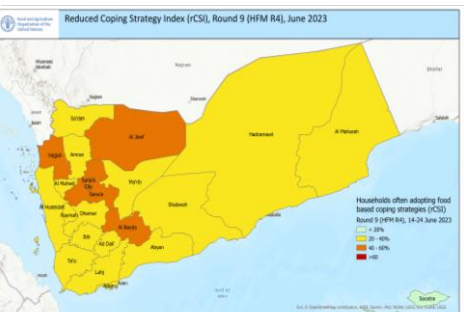

Household Dietary Diversity Score (HDDS), Moderate or Severe

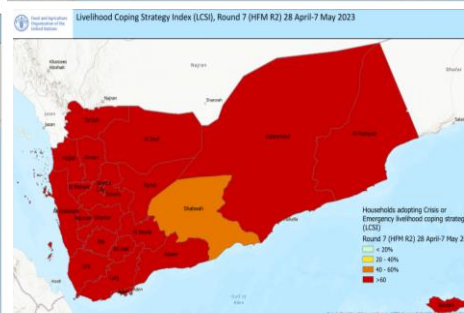

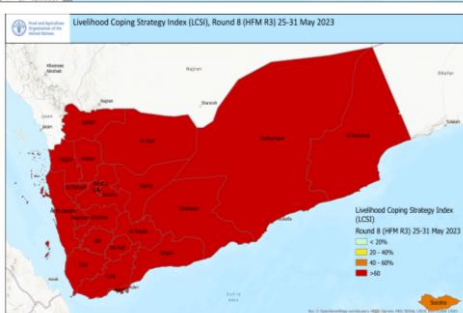

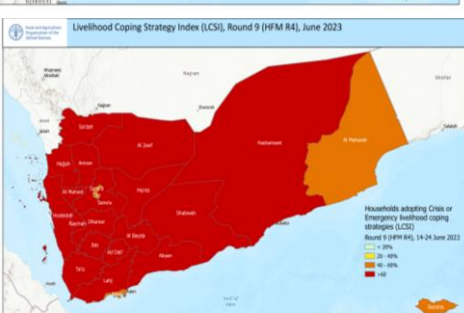

Inadequate Food Consumption (FCS) Borderline or Poor

Reduced Coping Strategy Index (rCSI), Often

Livelihood Coping Strategy Index (LCSI), Crisis or Emergency

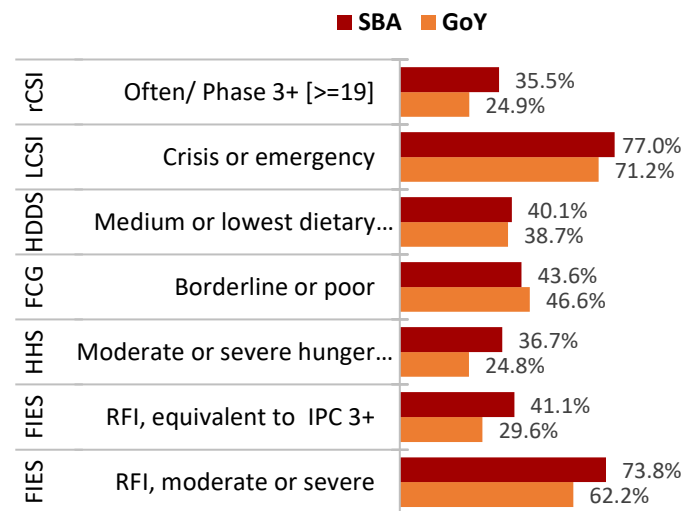

- Food insecurity is higher in rural and sub-urban areas than in the urban areas, however, households resorting to food-based coping strategies is higher in sub-urban and urban areas.

Food insecurity by rural, urban and sub-urban households, (June 2023)

- Hunger, poor dietary diversity and recent food insecurity experienced by the surveyed households is higher in SBA-controlled areas, and so are the negative coping strategies.

Food security outcome indicators by GoY and SBA areas (June 2023)

- Food insecurity was higher among households without income sources and households deriving main income from daily wages in agricultural and non-agricultural sectors. Amongst the agricultural producers, the fishing households reported relatively higher food insecurity in June 2023.

Main income sources, Round 9/HFM Round 4 (14-24 June 2023)	FIES, RFI IPC 3+	HHS Moderate or Severe	FCG Borderline or Poor	HDDS Medium or Lowest	rCSI Often/ [>=19]	LCSI Crisis or Emergency
No income sources	53.9%	49.3%	69.0%	51.9%	46.6%	91.6%
Daily wage in agriculture sector (farm and other casual employment in agriculture)	47.2%	43.0%	59.8%	41.8%	37.3%	84.0%
Off farm daily wages and other non-agricultural casual employment	45.6%	39.1%	46.7%	40.2%	40.9%	75.8%
Other non-agriculture employments (skilled and unskilled)	38.6%	32.5%	43.6%	39.5%	27.8%	71.0%
Production and sale of fish/seafood or fishery related product	34.2%	33.7%	11.7%	51.4%	16.1%	85.7%
Income not derived from work (charity, humanitarian aid, pension, welfare, remittance, rent, begging)	33.1%	33.4%	52.0%	43.5%	35.9%	73.4%
Production and sale of livestock and livestock products	32.8%	27.0%	40.3%	49.4%	29.6%	71.0%
Production and sale of staple and vegetables	32.3%	29.4%	30.7%	36.9%	34.0%	82.1%
Production and sale of cash crops (food and non-food)	29.1%	27.8%	31.9%	43.1%	31.9%	81.6%
Non-agricultural liberal, salaried employment, commerce	21.9%	17.4%	28.9%	25.5%	24.7%	61.4%
**Other agri income (production and sale of honey or bee products or collection/sale of forestry bush products)	73.2%	73.4%	50.2%	21.4%	43.9%	99.5%

**** The results for "Other agricultural income" is indicative due to few records.**

Methodology:

With technical support from DIEM, FAO Yemen (FSNIS) conducted the fourth high-frequency food security monitoring survey, which focuses on shocks and food security indicators. Data collection took place from 14 – 24 June 2023. This survey aims to monitor key food insecurity outcomes between IPC analysis periods to support decision-making. **In June 2023, 2524 households were surveyed.** At least 110 households were surveyed in each of the 22 governorates of Yemen. The data is representative of the population of Yemen and at the governorate level. The survey was conducted via computer-assisted telephone interviews, primarily using random digit dialling.

Annex: Food security outcome indicators, Round 9/HFM Round 4, 14-24 June 2023

Governorates	FIES, Prevalence of Recent Food Insecurity (RFI), SDG threshold		FIES, Prevalence of Recent Food Insecurity (RFI) based on IPC threshold	Food Consumption Group (FCG)			Household Dietary Diversity (HDDS)			Household Hunger Scale (HHS)			
	RFI moderate to severe	RFI Severe	RFI equivalent to IPC Phase 3+	Acceptable	Borderline	Poor	High dietary diversity (5-12 FG)	Medium dietary diversity (3-4 FG)	Lowest dietary diversity (0-2 FG)	Little to no hunger (HHS score =0)	Slight hunger (HHS Score =1)	Moderate hunger (HHS Score 2-3)	Severe hunger (HHS 4 and above)
